

Leather Bull

Very strong and exclusive aniline leather with natural milling grain and optimum seating comfort. Its thickness – in conjunction with visible insect bites, scars and other natural marks – contributes to the exclusive appearance of this leather. These marks are a natural part of the leather and are not grounds for return of the product. Technical specifications: ingrained fully milled leather from European hides, chrome-tanned and then vegetable-retanned using additional fats to give the maximum touch and softness. Manufactured without the use of environmentally harmful PCPs and CFCs.

Complies with all recommendations from Dansk Møbelkontrol, the Danish Furnituremakers' Quality Control organisation.

Thickness 3,0 - 3,3 mm.
